## Exercise: GradeList, version 4

Copy the files from `GradeList_v3` (the array version) into a new module `GradeList_v4`.

Modify class `GradeList` the following way:
   a) Change the type of instance variable `grades` to `ArrayList<Grade>`.
   b) Change the constructor to take no arguments and to create the `ArrayList` array instead of a `Grade` array.
   c) Modify all methods using the instance variable grade such that you use methods from the ArrayList class instead of the array index operators [ ].

Update and run your test program `GradeListTest` accordingly.
