# Exercises, SDJ1

Exercise: Course

a) Implement the 3 classes shown in the UML class diagram below:

Note that a `Course` has either one or two text books, (primary text book and secondary text book)

Make sure that `toString` never include a null string. If two books then include both books and if only one then include only this primary book (and not a null text)

b) Implement a test class with a main method and test the solution.
